

If you have a right triangle with angle α , then the _____ of α is the ratio of the length of the leg opposite α to the length of the hypotenuse.

If you have a right triangle with angle α , then the _____ of α is the ratio of the length of the leg opposite α to the length of the hypotenuse.

If you have a right triangle with angle α , then the _____ of α is the ratio of the length of the leg adjacent to α to the length of the hypotenuse.

If you have a right triangle with angle α , then the _____ of α is the ratio of the length of the leg opposite α to the length of the hypotenuse

If you have a right triangle with angle α , then the _____ of α is the ratio of the length of the leg opposite α to the length of the leg adjacent to α .

If you have a right triangle with angle α , then the _____ of α is the ratio of the length of the leg adjacent to α to the length of the hypotenuse.
